The Gearbox Clutch Assembly should be serviced yearly. By removing the clutch assembly, you will be able to inspect the worm shaft, clutch shoes/facings, drive disc, and clutch disc for undue wear. Cleaning, lubricating, and reassembly of the clutch should take about an hour. This is also a good time to be sure that the Deck Jam Micro Switch is working properly.

MAINTENANCE TIP:

Regular maintenance of the Turret Clutch and related parts will help keep your pinsetter running smoothly. Always check for excessive play in the indexing linkage. Very little to no play at all, along with proper adjustments, results in trouble free indexing. Yearly inspection, cleaning, and lubrication of the clutch itself will help eliminate multiple indexing and noise. It is also recommended to check that the Turret Jam Switch is working properly.
